Other types of special sensors and buttons are also available.

CARECOM have continued to market products that cater directly to the requirements of all people working in healthcare facilities and their patients.
One of these products is the Care sensor, designed for patients who are not physically able to press buttons.
Our line-up at Carecom includes a wide range of special sensors and buttons to provide the peace of mind of being in touch at all times to all patients.

Care sensor RCB-780E

We will continue to build a better nursing environment by making the wishes of nurses and patients come true.

CARECOM provides solutions in the nursing environment through the development of their nurse call & care management system.
As a professional company familiar with the nursing workplace, CARECOM utilizes its rich experience and know-how to actively offer localized solutions overseas.

Power Supply	100-240 VAC 50/60 Hz		

Care Management Function: Even more convenient care services for patients

Care Level Display Function
Displays patient's information in three colors in addition to the patient room number. Color-coding information allows nurses to provide swift and individual responses. This enables immediate response during earthquakes and other emergencies.

Patient room number

Area zoning sticker

Care level dial

Area Zone Display Function
Displays the area zone of patient's room with area zoning sticker.

Nurse Team Setup Function
This function sets up and changes the Master unit's call sounds by nurse teams. A maximum of five different team settings are possible.

Call Report Function
Connecting the system to a personal computer and specifying the required period and patient room number enables the patient's call reports to be sorted and extracted.
